

# INFORMATION SECURITY

## TRUE SECURITY PROFESSIONALS + QUALITY SOLUTIONS = SECURE ENTERPRISE

### PRACTICE OVERVIEW

Security has become a major concern for companies throughout the world. New vulnerabilities are discovered on a daily basis and are being used by external as well as internal intruders. This malicious activity can severely affect an organization's business operations and cost millions of dollars to rectify. In today's computing environment, every company needs to engage in a comprehensive security initiative to minimize risk. Idea Integration consultants have over 25 years of combined experience in the security arena. Our security experts hold the Certified Information Systems Security Professional (CISSP) designation along with other certifications from the International Information Systems Security Certification Consortium (ISC), the National Security Agency (NSA), and Microsoft®.

Organizations today realize the importance of securing their proprietary data from unauthorized sources. Idea Integration's security practice offers a wide range of services, each of which complement the various solutions developed by Idea's infrastructure team.

### SECURITY SOLUTIONS

#### Enterprise Security Assessment

In today's business world, organizational management often focuses more on business strategy rather than the security requirements needed to protect business interests. Idea's information security professionals identify known vulnerabilities from all angles. Our security consultants understand the concept of "defense-in-depth" and realize the importance of taking a proactive approach to securing a company's assets. Policy review, network architecture evaluation, and vulnerability assessments are just a few of the many components developed under our security assessment offering.

#### Information Security Governance

Security governance is a key component of achieving secure and seamless business operations, and regulatory compliance has become a serious matter. Many healthcare, financial, and public corporations fall under one of various legislative laws that mandate the disclosure of company information. Idea Integration's security governance methodology is based on the National Security Agency's Information Assurance Methodology (NAIAD). Our security experts have worked in the areas of HIPAA and Sarbanes-Oxley, and utilize the ISO17799 / BS7799 2002 frameworks for assessing organizations of all sizes.

#### Managed Security Monitoring

Idea partners with industry-leading CounterPane™ Internet Security to offer a managed security monitoring service (MSM). This solution allows IT staff to focus on core daily duties while outsourcing the expertise of security monitoring to our analysts. This provides 24x7x365 monitoring of the network at a fraction of what it would cost internally. The MSM monitors the network and reacts to any disallowed or suspicious network activity by immediately notifying the client and creating a valid response to the threat.

#### Annual Security Subscription

Organizations are often challenged to maintain a complete security posture, and Idea's solution enables organizations to concentrate on daily business needs. Our security consultants conduct annual security testing to ensure the integrity of the network is upheld. Our annual security subscription service consists of two enterprise security assessments, multiple external perimeter tests and monthly perimeter scans.

### Disaster Recovery Planning

Unforeseen threats and natural disasters can affect an organization's business processes at any time. Idea has deep expertise in the area of disaster recovery and works with your organization to ensure your current disaster recovery plan is complete and aligned with industry best practices. Idea develops a disaster recovery plan and assists you in implementing the necessary infrastructure and applications to support it.

### Physical Security Testing

Organizations often rely on perimeter devices for protection from unauthorized access but can fail to address the physical security of their facilities and data centers. Idea conducts a comprehensive assessment of your physical assets, ensuring the appropriate security measures are in place and sensitive business data is secure. Our security experts provide companies with simulated physical attack on their facilities in accordance with real-world events.

### Security Policy Implementation/Review

Companies often implement various written policies that protect themselves, as well as their users, from all types of legalities. Unless these documents have been officially approved by executive management, they provide little defense if challenged. Idea develops comprehensive security policies and other supporting documentation, allowing you to institute and enforce best practices across your enterprise.

### Wireless Security Assessment

In today's world, mobile technologies are becoming more prevalent. Although convenient, unprotected wireless access may allow malicious users to launch attacks bypassing your standard security counter measures. Idea's wireless security assessment involves an in-depth look at your organization's wireless infrastructure security posture. Our security professionals perform a thorough analysis of your wireless systems, protection mechanisms, and wireless security policies. This assessment protects you from potential threats and data disclosure.

When you work with Idea Integration professionals-whether it's one person or an entire team selected from our nationwide organization-you also have the collective resources and commitment of MPS Group, a Fortune 1000 billion-dollar international services firm.

At Idea, we judge our success by our high number of repeat customers. We execute. And we deliver on our promises. Just ask our clients.
